

The S&G® 2740 Advantage

- **Quick and Easy Installation:** Installs like a mechanical combination lock.
- **Enhanced Security:** No wires or cables from outside the container to the lock inside provides for enhanced security with the additional benefits of faster installation and higher reliability.
- **Instant Power:** No need to spin the dial to generate power. Long life off the shelf lithium battery and common back-up battery assure power is there when needed.
- **Easy to operate:** The familiar left-right-left dialing sequence and one hand operation eliminates need for re-training personnel and improves the user experience.
- **Great for new and retrofit installations:** The S&G 2740 uses the industry standard S&G Magic Module® footprint. It also has a drilled and tapped bolt with a .461 inch (11.71mm) bolt throw. It better accommodates the boltwork of some older GSA containers and reduces the need for mounting plate or boltwork modifications.
- **Set up module:** The Graphical/LED driven module simplifies installation, programming and troubleshooting.
