

# 6140 Door Access Control System

## *Superior security for single door access applications.*

The 6140 System combines S&G's model 6123 Safe Lock with a modified version of our U.S. Government latching extension for doors. Typical applications include ATM rooms, telephone and computer equipment rooms, day gates for vaults or any controlled area where an auxiliary door lock is needed.

You'll enjoy tremendous flexibility and greater management control:

- Up to seven 6-digit user PIN codes, plus a special time delay override code.
- May be set up so that two distinct codes must be entered to open the door.
- Equip the 6140 with S&G's Biometric Keypad for greater security and ease of operation with advanced fingerprint recognition capability.

*6140 keypad surface mounts easily.*

- Unlocks your door in one easy step – just enter the code and you're in.
- Automatically relocks when you shut the door.
- Easily change codes and lock functions at any time with a few touches of the keypad.
- Requires no turning of a dial to unlock the lock.
- Offers secure, reliable motor-driven lock bolt operation.
- Protects from being opened or manipulated with repeated, random code entry.

***Don't settle for less protection when  
the 6140 System gives you the security  
and control you need.***

# 6140 Door Access Control System

*The secure,  
smart way to control  
local door access.*

**Easy to install.** Quick and easy surface mounting of lock, strike and keypad allows for offsetting the keypad from traditional lock positioning for increased security.

**Over 8,000 openings between battery changes.** Two standard 9-volt alkaline batteries are housed in the keypad (S&G recommends Duracell®). When batteries get low, the lock's audio signal changes pitch to let you know. Your access codes remain programmed while you change batteries.

**Interlocking strike.** The 6140 System features an interlocking strike to prevent spreading of the door and frame — the same feature required for high security applications by the U.S. Government. Available for either inswing or outswing door applications.

**A choice of finishes.** Select any of the available electronic combination lock keypad finishes to complement existing door hardware.

**Delay opening for up to 99 minutes.** Program an opening delay of up to 99 minutes. Employees must enter their access

code, wait the delay period and re-enter their code within the opening window. A time delay override mode is available when immediate access is required by authorized personnel.

#### **Ordering Information:**

(Note: purchase keypads as a separate item.)

Model 6140-003, inswing door application, #1 and #3 strikes.

Model 6140-004, outswing door application, #2 strikes.

#### **Additional security options:**

- Can be used with optional S&G Biometric Keypad.
- Spy-proof cover for keypad.
- Time delay status indicator for local or remote display.
- Bolt position indicator for monitoring of lock open/close status.
- Keypad extension cables.
- Remote enable/disable of lock access with the addition of an optional remote enable module.

**Protect your assets with the 6140 electronic safe lock.**

*Add S&G's Biometric Keypad to enhance 6140 features with advanced fingerprint authentication technology—faster, more secure access to protected areas.*
