

S&G® ASEAL™ Solution

ASERIES™ Lock Sold Separately

The ASEAL™ solution from Sargent and Greenleaf provides for integration of the S&G® ASERIES™ ATM locking solution into any front end system requiring a close code or close seal. The ASEAL™ design combines simple LCD driven operation in a rugged, hand-held portable package. With super-strong magnets built into the case back, the ASEAL™ can easily and confidently be affixed to the wall of the armored truck.

Simply insert the ASERIES™ touch-key and the ASEAL™ reads and stores the key information and generates an ASEAL™ value that may be entered into either your front end system, IVR or into the ASERIES™ LMS software.

Once the ASEAL value is entered into the front end system or LMS software, it provides accurate audit information pertaining to the following ATM Lock conditions. This will ensure the security of your ATM operations and provide you the necessary data to take action if required.

- Lock bolt extended and door switch wire closed
- Lock bolt did not retract
- Lock open for more than one hour
- Penalty time started
- Already consumed OTC code
- Lock clock out of synch
- Dispatcher Error (file sharing)
- Operation failed

Sargent & Greenleaf® ASEAL™ Solution

ASEAL™ Features

- Provides a 6 digit numeric value that can be entered into the front end system, IVR system or LMS software.
- The ASEAL™ value is an obscured value produced by a unique algorithm that is based on audit trail information from the lock including door switch condition and bolt position.
- Quickly view the current and last ASEAL Value on the 2 line backlit LCD
- Power is provided by a single 9V battery. (DC power jack standard for customer supplied power converter)
- Mounting options include via magnets or hang bolts.
- Easy access battery compartment with quick snap-connect battery attachment.

Small and Portable with Rubber-Like Side Panels for Sure Grip
